| | Savitribai Phule Pune University, Pune | | | | |
|-------|--|--|--|--|--|
| | | Bachelor of Information Technology | | | |
| | | rogram Educational Objectives | | | |
| PEO1 | | ental concepts in mathematics, science, engineering and Technology to | | | |
| | address technological ch | | | | |
| PEO2 | PEO2 Possess knowledge and skills in the field of Computer Science and Information Technology for | | | | |
| | analyzing, designing and implementing complex engineering problems of any domain with | | | | |
| | innovative approaches. | | | | |
| PEO3 | | aptitude for research, entrepreneurship and higher studies in the field of | | | |
| 5504 | Computer Science and Ir | | | | |
| PEO4 | Have commitment to e learning. | thical practices, societal contributions through communities and life-long | | | |
| PEO 5 | Possess better commun | ication, presentation, time management and team work skills leading to | | | |
| | | t professionals and will be able to address challenges in the field of IT at global | | | |
| | level. | | | | |
| | | | | | |
| | | Program Outcomes | | | |
| | | dents are expected to know and be able to- | | | |
| PO1 | Engineering | An ability to apply knowledge of mathematics, computing, science, | | | |
| | knowledge | engineering and technology; | | | |
| PO2 | Problem analysis | An ability to define a problem and provide a systematic solution with the help of conducting experiments, analyzing the problem and interpreting the | | | |
| PUZ | | data; | | | |
| | Design / | An ability to design, implement, and evaluate a software or a | | | |
| PO3 | Development of | software/hardware system, component, or process to meet desired needs | | | |
| | Solutions | within realistic constraints; | | | |
| | Conduct | An ability to identify, formulate, and provide systematic solutions to | | | |
| PO4 | Investigations of | complex engineering/Technology problems; | | | |
| | Complex Problems | An ability to use the techniques, skills, and medern engineering technology | | | |
| PO5 | Modern Tool Usage | An ability to use the techniques, skills, and modern engineering technology tools, standard processes necessary for practice as a IT professional; | | | |
| | | An ability to apply mathematical foundations, algorithmic principles, and | | | |
| PO6 | The Engineer and | computer science theory in the modeling and design of computer-based | | | |
| | Society systems with necessary constraints and assumptions; | | | | |
| DO7 | Environment and | An ability to analyze and provide solution for the local and global impact of | | | |
| PO7 | Sustainability | information technology on individuals, organizations and society; | | | |
| PO8 | Ethics | An ability to understand professional, ethical, legal, security and social | | | |
| | | issues and responsibilities; | | | |
| PO9 | Individual and Team | An ability to function effectively as an individual or as a team member to | | | |
| | Work | accomplish a desired goal(s); | | | |

2

| PO10 | Communication Skills | An ability to engage in life-long learning and continuing professional development to cope up with fast changes in the technologies/tools with the help of electives, professional organizations and extra-curricular activities; |
|------|-----------------------------------|---|
| PO11 | Project Management and Finance | An ability to communicate effectively in engineering community at large by means of effective presentations, report writing, paper publications, demonstrations; |
| PO12 | Life-long Learning | An ability to understand engineering, management, financial aspects, performance, optimizations and time complexity necessary for professional practice; |

| | Program Specific Outcomes (PSO) |
|-------|---|
| | A graduate of the Information Technology Program will demonstrate- |
| | An ability to apply the theoretical concepts and practical knowledge of Information |
| PSO 1 | Technology in analysis, design, development and management of information processing |
| | systems and applications also in the interdisciplinary domain. |
| | An ability to analyze a problem, and identify and define the computing infrastructure and |
| PSO 2 | operations requirements appropriate to its solution. |
| | IT graduates should be able to work on large scale computing systems. |
| | An understanding of professional, business and business processes, ethical, legal, security |
| PSO 3 | and social issues and responsibilities. |
| P30 5 | At times technical decisions are influenced by the needs of the business and its processes |
| | like quality control processes. An IT graduate should be able to deal with that. |
| | Practice communication and decision making skills through the use of appropriate |
| PSO 4 | technology and be ready for industry culture |

#Mandatory Audit Course 4:

214459 A - Water Supply and Treatment
214459 B - Language Study- Japanese- Module II
214459 C - Waste Management and Pollution Control
214459 D - Intellectual Property Rights

Instructions:

- Practical or Tutorial must be conducted in batches and number of batches per division should be as per guidelines from regulatory bodies.
- Required Minimum number of Experiments/ Assignments in Practical/ Tutorial shall be carried out as mentioned in the syllabi of respective subjects from the set of prescribed Experiments/Assignments.
- In addition to the prescribed list, the instructor for Practical/ Tutorial may design one or two additional experiments/Assignments relating to the subject covering some of the research/application areas of the concepts from syllabi.
- For each experiment/ assignment in a practical/ tutorial subject, the instructor must ask students to prepare a write-up with explanation/ applicability/ flow charts/ algorithms/ problems incurred/ problems addressed etc. in related experiments/ assignment.
- Assessment of tutorial work has to be carried out as term-work examination. Term-work Examination at second year of engineering course shall be internal continuous assessment only.
- Project based learning (PBL) requires mentoring and internal continuous assessment by faculty throughout the semester for successful completion of the tasks assigned to the students. A teaching workload of four Hours/week/batch is associated with PBL subject and it is to be allocated to the faculty conducting PBL mentoring and internal continuous assessment. The Batch shall contain sub-groups each comprising 5 to 6 students for easing the process of internal continuous assessment. Assignments / activities / models / projects etc. completed under project-based learning will be considered for internal continuous assessment, evaluation, and award of credits for PBL subjects.
- Audit course is a mandatory non-credit course. Systematic assessment has to be conducted at the end of semester for Semester III & IV respectively for award of grade at college level.
- The course objectives, course outcomes and CO-PO mapping table are provided for reference; the course instructor is requested to modify as per his perspective
- Case Studies may be assigned as self-study to students and to be excluded from theory examinations.
- The CO-PO mapping table at end of course contents, indicates the correlation levels of 3, 2, 1 and '- 'The notation of 3, 2 and 1 denotes (high), moderately (medium) and slightly (low) mapping level respectively. The meaning of '-'is no correlation between CO and PO.
- All the rules, regulations and guidelines issued by regulatory authorities from time to time for effective conduction of curriculum, assessment and evaluation are to be strictly followed.

SEMESTER - I

| Sav | itribai Phule Pune Univer | rsity, Pune |
|--|---------------------------|--|
| Secon | d Year Information Tech | nology (2019 Course) |
| | 214441: Discrete Mathe | matics |
| Teaching Scheme: | Credit | Examination Scheme: |
| TH: 03 hr/week Tutorial: 01 hr/week | 03 01 | Mid Semester: 30Marks End Semester: 70Marks TW : 25Marks |
| | Mathamatica | |
| Prerequisite Courses, if any: Basic | iviainematics | |
| Companion Course, if any: Basic | Mathematics | |

On completion of the course, learner will be able to-

CO1: Formulate, apply formal proof techniques and solve the problems with logical reasoning.

CO2: Analyze and evaluate the combinatorial problems by using probability theory.

CO3: Apply the concepts of graph theory to devise mathematical models.

CO4: Analyze types of relations and functions to provide solution to computational problems.

CO5: Identify techniques of number theory and its application.

CO6: Identify fundamental algebraic structures.

COURSE CONTENTS

| Unit I | Sets And Propositions | (06 Hrs + 2hrs Tutorial) |
|--------|-----------------------|--------------------------|

Sets: Sets, Combinations of Sets, Venn Diagram, Finite and Infinite Sets, Countable Sets, Multisets, Principle of Inclusion and Exclusion, Mathematical Induction.

Propositions: Propositions, Logical Connectives, Conditional and Bi-conditional Propositions, Logical Equivalence, Validity of Arguments by using Truth Tables, Predicates and Quantifiers, Normal forms. Applications of Sets and Propositions.

| Case Studies | Discuss logical paradoxes | |
|--|--|--------------------------|
| Mapping of Course Outcomes for Unit I | CO1 | |
| Unit II | Combinatorics And Discrete Probability | (06 Hrs + 2hrs Tutorial) |

Combinatorics: Rules of Sum and Product, Permutations, Combinations.

Discrete Probability: Discrete Probability, Conditional Probability, Bayes Theorem, Information and Mutual Information. Applications of Combinatorics and Discrete Probability.

| Case Studies | Discuss telephone numbering plan | | | |
|---|----------------------------------|--------------------------|--|--|
| Mapping of Course Outcomes for Unit II | CO2 | | | |
| Unit III | Graph Theory | (06 Hrs + 2hrs Tutorial) | | |

Graphs: Basic Terminologies, Multi-Graphs, Weighted Graphs, Sub Graphs, Isomorphic graphs, Complete Graphs, Regular Graphs, Bipartite Graphs, Operations on Graphs, Paths, Circuits, Hamiltonian and Eulerian graphs, Travelling Salesman Problem, Factors of Graphs, Planar Graphs, Graph Colouring.

Trees: Tree Terminologies, Rooted Trees, Path Length in Rooted Trees, Prefix Codes, Spanning Trees, Fundamental Cut Sets and Circuits, Max flow –Min Cut Theorem (Transport Network). Applications of Graph Theory.

| Case Studies | Investigate the properties of web graph | | | | |
|--|---|--------------------------|--|--|--|
| Mapping of Course Outcomes for Unit III | CO3 | | | | |
| Unit IV | Relations And Functions | (06 Hrs + 2hrs Tutorial) | | | |

Relations: Properties of Binary Relations, Closure of Relations, Warshall's Algorithm, Equivalence Relations, Partial Ordering Relations, Lattices, Chains and Anti Chains.

Functions: Functions, Composition of Functions, Invertible Functions, Pigeonhole Principle, Discrete Numeric Functions.

Recurrence Relations: Recurrence Relation, Linear Recurrence Relations with Constant Coefficients, Total Solutions.Applications of Relations and Functions.

| Case Studies | Describe basic principles of relational databases | | | |
|---|---|--------------------------|--|--|
| Mapping of Course Outcomes for Unit IV | CO4 | | | |
| Unit V | Introduction To Number Theory | (06 Hrs + 2hrs Tutorial) | | |
| | | | | |

Divisibility of Integers: Properties of Divisibility, Division Algorithm, Greatest Common Divisor GCD and its Properties, Euclidean Algorithm, Extended Euclidean Algorithm, Prime Factorization Theorem, Congruence Relation, Modular Arithmetic, Euler Phi Function, Euler's Theorem, Fermat's Little Theorem, Additive and Multiplicative Inverses, Chinese Remainder Theorem.

| Case Studies | Number theoretic concepts public keys and private keys |

Guidelines for Tutorial and Term Work

• Tutorial shall be engaged in four batches (batch size of 20 students maximum) per division.

• Term work shall be based on continuous assessment of six assignments (one per each performance in internal tests.

Examples on various topics of respective unit will be covered in tutorial sessions on the basis of following,

- 1. Problems for deep understanding of concepts.
- 2. Identify applications and device mathematical models for real time problems.

| Sr. No. | Name of the Tutorial | Description | Applicable CO |
|---------|-------------------------|---|------------------|
| | | Formulate problems to illustrate | |
| | | 1. Sets, universal sets, multisets, and operations on sets | |
| 1 | Introduction to | such as union, intersection, complement and set | CO1 |
| _ | Set Theory | difference. | 001 |
| | | 2. Introduce sets as mathematical model to classify data | |
| | | sets. | |
| | | Formulate problems that comprises | |
| | | 1. Translation of English sentences into logical propositions | |
| | | by using logical connectives. | |
| 2 | Propositional | 2. Proof for logical equivalences by using truth table | CO1 |
| | Logic | analysis. | |
| | | 3. Propositions by using Predicates and Quantifiers. | |
| | | 4. Conjunctive and Disjunctive Normal Forms. | |
| | | 5. Proof by using Mathematical Induction | |
| | | Design problems to illustrate counting techniques by using | |
| | | 1. Permutation and Combinations | |
| 3 | Combinatorics | 2. Permutation with repetition | CO2 |
| | | 3. Properties of <i>nCr and nPr</i> | |
| | | 4. Addition and Multiplication Principle | |
| | | Formulate problems for better understanding of | |
| 4 | Discrete | 1. Discrete Probability | CO2 |
| | Probability | 2. Conditional Probability and Bay's theorem | 001 |
| | | Identify applications of probability to Computer Science | |
| | | Design problems to study | |
| | | 1. Graph properties and operations on graphs | |
| 5 | Graph Theory | 2. Connectedness, Hamiltonian and Eulerian graphs. | CO3 |
| | | 3. Introduce graph as a mathematical model to understand | |
| | | transport, communication, and social networks. | |
| | | Problems to be formulated on | |
| | | 1. Prefix codes, Huffman codes | |
| 6 | Tree | 2. Fundamental cut sets and Fundamental circuits | CO3 |
| | | 3. Transport network by using Maximum Flow Minimum | |
| | | cut Theorem | |

| | | 4. Identify applications of tree for Searching Algorithms, | |
|----|-----------------|--|-----|
| | | Polish notation | |
| | | Problems to understand | |
| | | 1. Types of Relations | |
| | Relations and | 2. Equivalence relation and Equivalence classes | |
| 7 | Functions | 3. Transitive closure by using Warshall's Algorithm. | CO4 |
| | Functions | | |
| | | 4. Injective, Surjective and Bijective Functions. | |
| | | 5. Pigeonhole principle and its applications | |
| | | Problems based on | |
| | | 1. Formation of recurrence relation | |
| - | Recurrence | 2. Solving homogeneous recurrence relation with constant | |
| 8 | Relation | coefficients | CO4 |
| | | 3. Solving non homogeneous recurrence relations to find | |
| | | total solution. | |
| | | 4. Identify applications of recurrence relation in counting. | |
| | | Problems to illustrate concepts such as- | |
| | Introduction to | 1. Divisibility and its properties | |
| 9 | Number Theory | 2. Greatest common divisor and its properties | CO5 |
| | | 3. Prime numbers and prime factorization theorem to find | |
| | | GCD and LCM of two numbers | |
| | | Problems to demonstrate applications of- | |
| | | 1. Euler's theorem and Fermat's theorem in counting | |
| | Modular | remainders | |
| 10 | Arithmetic | 2. Linear congruences | CO5 |
| | Antimetic | 3. Chinese Remainder Theorem | |
| | | 4. Applications of Modular arithmetic to Cryptography and | |
| | | Security | |
| | | Problems to be formulated to illustrate | |
| | | 1. Concept of algebraic structure | |
| | Algobraio | 2. Examples of semigroup, monoid, group and abelian | |
| 11 | Algebraic | group | CO6 |
| | Structures-I | 3. Generating group codes by using normal subgroups | |
| | | 4. Application of Algebraic Structure in operator | |
| | | overloading. | |
| | | Problems to illustrate | |
| | | 1. Definition and examples of Ring, types of Ring | |
| 12 | Algebraic | 2. Zero divisors and Integral domain | CO6 |
| | Structures-II | 3. Multiplicative inverses in different rings, and Field | |
| | | _ | |

* Subject Teacher is free to give different tasks to students as per the above stated guidelines.

* Ideas of the students as per above stated guidelines can also be accepted.

| and basic p | rinciple of interfacing | input, output de | evices. | | |
| COURSE CONTENTS | | | | | |
| | | | | | |

complement representation, unsigned Binary arithmetic (addition, subtraction, multiplication, and division), subtraction using 2's complement; IEEE Standard 754 Floating point number representations. **Codes**: Binary, BCD, octal, hexadecimal, Excess-3, Gray code & their conversions

Logic minimization: Representation of logic function: logic statement, truth-table, SOP form, POS form; Simplification of logical functions using K-Maps up to 4 variables.

Case Study : 1) CMOS 4000 series ICs 2) practical applications of various codes in computers 3) four basic arithmetic operations using floating point numbers in a calculator.

Mapping of Course Outcomes for Unit I: CO1

| Unit 2 | Combinational Logic Design | 06 Hrs | | | | | |
|--|--|---|--|--|--|--|--|
| Design using SSI c | hips: Code converters, Half- Adder, Full Adder, Half Subtract | tor, Full Subtractor, n bit | | | | | |
| Binary adder. | | | | | | | |
| Introduction to M | SI chips: Multiplexer (IC 74153), Demultiplexer (IC 74138), D | ecoder (74238) Encoder | | | | | |

| Secor | Savitribai Phule Pune Universit nd Year Information Technology 214443 :Data Structure & Algo | (2019 Course) | |
|--------------------------------|--|--------------------------------|--------------------|
| Teaching Scheme: | Credit | Examination S | Scheme: |
| TH: 03hr/week | 03 | Mid Semester: End Semester: | |
| Prerequisite Courses, if any: | Fundamental knowledge of program | ming language and basi | cs of algorithms |
| Companion Course, if any: [| Discrete Structures/Discrete Mathema | tics | |
| Course Objectives: | | | |
| 1. To study data structure | es and their implementations and app | lications. | |
| 2. To learn different sear | ching and sorting techniques | | |
| 3. To study some advance | ed data structures such as trees, grapl | ns and tables. | |
| 4. To learn different file o | organizations. | | |
| 5. To learn algorithm dev | elopment and analysis of algorithms. | | |
| Course Outcomes: | | | |
| CO1: Analyze algorithms | and to determine algorithm correctne | ss and time efficiency c | class. |
| CO2: Understand differen | nt advanced abstract data type (ADT) a | and data structures and | l their |
| implementations. | | | |
| CO3: Understand differer | nt algorithm design techniques (brute | -force, divide and conqu | uer, greedy, etc.) |
| and their implemen | tation. | | |
| CO4: Apply and implement | nt learned algorithm design technique | s and data structures to | solve problems. |
| CO5: Perform basic analy | sis of algorithms with respect to time | and space complexity. | |
| CO6: Use algorithmic fou | ndations for solving problems and pro | gramming. | |
| | COURSE CONTENT | | |
| Unit- I | Introduction | | (06 Hrs) |
| Introduction to Data Struc | tures: Concept of data, Data object, I | ata structure, Concept | of Primitive and |
| non-primitive, linear and | Nonlinear, static and dynamic, pers | istent and ephemeral | data structures, |
| Definition of ADT, Array: S | ingle and multidimensional array add | ress calculation, recursi | on. |
| Searching and sorting: Ne | ed of searching and sorting, Concep | t of internal and exter | nal sorting, sort |
| stability, Searching method | ls: Linear and binary search algorithm | s, Fibonacci Series. | |
| Sorting methods: Bubble, i | insertion, Quick, Merge, shell and com | parison of all sorting m | nethods. |
| Case Studies | Set Operation, String Operation | | |
| Mapping of Course | CO1, CO2, CO3, CO5 | | |
| Outcomes for Unit I | | | |
| Unit- II | Stack &Queue | | (06 Hrs) |
| Linked Organization: Conc | ept of linked organization, Singly Linke | d List, Doubly Linked Lis | t, Circular Linked |
| List as an ADT (Operations: | Create, Display, Search, Insert, Delete | e). | |
| Stack: Concept of stack, Co | ncept of implicit and explicit stack, sta | ck as an ADT using sequ | ential and linked |

organization, Applications of stack: converting expressions from infix to postfix or prefix form, evaluating postfix or prefix form.

Queue: Concept of queues as ADT, Implementation of queue using array and linked organization, Concept of circular queue, double ended queue, Applications of queue: priority queue.

| | Reversing a string, balanced parentheses in algebraic expre | |
|--|--|--|
| | Hanoi problem, double ended queue as Stack and Queue. | |
| Mapping of Course | CO1, CO2, CO3, CO5 | |
| Outcomes for Unit II | | |
| Unit- III | Trees | (06 Hrs) |
| Tree : Trees and binary | y trees-concept and terminology, Expression tree, Binary tree as | an ADT, Recursive |
| and Non recursive algo | prithms for binary tree traversals, Binary search trees, Binary sea | arch tree as ADT. |
| Threaded binary tree: | Concept of threaded binary tree (inorder, preorder and postore | der). Preorder and |
| In-order traversals of i | n-order threaded binary tree, Applications of trees. | |
| Case Studies | Construction of BST from pre and postorder traversal, | Expression Tree |
| | construction | |
| Mapping of Course | CO1, CO2, CO3,CO5 | |
| Outcomes for Unit III | | |
| Unit- IV | Graph | (06 Hrs) |
| Case Studies | Consider a network of computers connected to each othe has various parameters associated with it as distance, p bandwidth (capacity of carrying data), etc. Based on t | |
| | decide which path should be chosen to send data from every other on the network. | - |

| | 214444: Object Oriented Progr | amming | |
| Teaching Scheme | Credit | Examinatio | on Scheme |
| TH: 03Hrs/Week | 03 | Mid Semeste | er: 30 Marks |
| | | End Semeste | er: 70 Marks |
| Prerequisites: Principles of F | Programming Languages | | |
| Course Objectives: | | | |
| 1. Apply concepts of | object oriented paradigm. | | |
| 2. Design and impler | ment models for real life problems by u | sing object oriented pro | ogramming. |
| 3. Develop object or | iented programming skills. | | |
| Course Outcomes: | | | |
| CO1: Differentiate vari | ous programming paradigms and apply | basic concepts of OOP | |
| CO2: Identify classes, c | bjects, methods, and handle object cre | eation, initialization, and | d destruction to |
| model real-world | problems. | | |
| CO3: Identify relations | hip among objects using inheritance an | nd polymorphism. | |
| CO4: Handle different | types of exceptions and perform gener | ic programming. | |
| CO5: Use file handling | for real world application. | | |
| CO6: Apply appropriate | e design patterns to provide object-ori | ented solutions. | |
| | COURSE CONTENT | | |
| Unit I | Foundations of Object Orien | ted Programming | (06 hrs) |
| Introduction OOP : Softwa | are Evolution, Introduction to Procedura | al, Modular, Object-Orie | ented and Generic |
| | s, Limitations of Procedural Prog | · · · | |
| | als of Object-Oriented Programming: O | - | - |
| • • | ation, Data Abstraction and Informat | • | |
| Static and Dynamic Bindin | | 0, | , , , , , |
| - | Model a real world scenario (vehicle c | lass, fruit class, studen | t management in |
| | university etc.) using Object Oriented | Paradigm | C C |
| Mapping Course | | 01 | |
| Outcomes for Unit 1 | | | |
| Unit II | Classes, Objects and M | lethods | (06 hrs) |
| Class : Creating a Class, V | isibility/Access Modifiers, Encapsulation | on, Methods: Adding a | Method to Class, |
| Returning a Value, Adding | g a Method That Takes Parameters, Tl | he 'this' Keyword, Met | hod Overloading, |
| Object Creation, Using Ob | oject as a Parameters, Returning Object | t, Array of Objects, Me | emory Allocation: |
| 'new', Memory Recovery: | 'delete', Static Data Members, Static | Methods, Forward Dec | laration, Class as |
| Abstract Data Types (ADTs | s), Classes as Objects. | | |
| Case Study | Represent a vector using class and in | clude appropriate met | hods to perform |
| - | various tasks. | | |
| Mapping of Course | CO2 | | |
| | | | |
| Outcomes for Unit II | | | |

| Unit III | Constructors and Destructors | (06 hrs) | | | | | | | |
|----------------------------------|---|--------------------|--|--|--|--|--|--|--|
| Constructors: Introductio | n, Use of Constructor, Characteristics of Constructors, Type | s of Constructor, | | | | | | | |
| Constructor Overloading, | Constructor with Default Arguments, Symbolic Constants, Ga | rbage Collection: | | | | | | | |
| Destructors and Finalizers | | | | | | | | | |
| Case Study | A book shop inventory | | | | | | | | |
| Mapping of Course | CO2 | | | | | | | | |
| Outcomes for Unit III | | | | | | | | | |
| Unit IV | Inheritance and Polymorphism | (06 hrs) | | | | | | | |
| Inheritance: Introduction | , Need of Inheritance, Types of Inheritance, Benefits of Inh | eritance, Cost of | | | | | | | |
| Inheritance, Constructors | in derived Classes, Method Overriding, Abstract Classes and In | iterfaces. | | | | | | | |
| Polymorphism and Softwa | are Reuse: Introduction, Types of Polymorphism (Compile Tir | ne and Run Time | | | | | | | |
| Polymorphism), Mechanis | ms for Software Reuse, Efficiency and Polymorphism | | | | | | | | |
| Case Study A bank account system | | | | | | | | | |
| Mapping of Course CO3 | | | | | | | | | |
| Outcomes for Unit IV | | | | | | | | | |
| Unit V | Exception Handling and Generic Programming | (06 hrs) | | | | | | | |
| Exception: Errors, Types of | of Errors, Exception and its Types, Exception-Handling Fundam | ientals, Uncaught | | | | | | | |
| Exception, Using try and | Catch, Multiple Catch Clauses, Nested Try Statements, User | Define Exception | | | | | | | |
| using Throw. | | | | | | | | | |
| Generics: What are Gener | ics? Introduction to Language Specific Collection Interface: List | Interface and Set | | | | | | | |
| Interface, Collection Class | es: ArrayList Class and LinkedList Class. | | | | | | | | |
| Case Study | Exception handling and generic programming using array list | (ArrayList class). | | | | | | | |
| Mapping of Course | CO4 | | | | | | | | |
| Outcomes for Unit V | | | | | | | | | |
| Unit VI | File Handling and Design Patterns | (06 hrs) | | | | | | | |
| File Handling: Introductio | n, Concepts of Stream, Stream Classes, Byte Stream Classes, C | Character Stream, | | | | | | | |
| Classes, Using Stream, Oth | ner Useful I/O Classes, Using the File Class, Input/output Excep | tions, Creation of | | | | | | | |
| Files, Reading/Writing Ch | aracter, Reading/Writing Bytes, Handling Primitive Data Type | es, Concatenating | | | | | | | |
| and Buffering Files, Rando | m Access Files. | | | | | | | | |
| Design Patterns: Introduc | tion, Types of Design Patterns, Adapter, Singleton, Iterator | | | | | | | | |
| Case Study | Student Management System | | | | | | | | |
| Mapping of Course | CO5 and CO6 | | | | | | | | |
| Outcomes for Unit VI | | | | | | | | | |

parameters such as timely conduction of practical assignment, methodology adopted for implementation of practical assignment, timely submission of assignment in the form of handwritten write-up along with results of implemented assignment, attendance etc.

- 2. Examiners will judge the understanding of the practical performed in the examination by asking some questions related to theory & implementation of experiments he/she has carried out.
- 3. Appropriate knowledge of usage of necessary tools software and hardware such as ICs, memory elements, digital trainer kits, IC tester should be checked by the faculty member.

Guidelines for Laboratory Conduction

The instructor is expected to frame the assignments by understanding the prerequisites, technological aspects, utility and recent trends related to the topic. The instructor may set multiple sets of assignments and distribute among batches of students. It is appreciated if the assignments are basedon real world problems/applications. Use of open source software is encouraged. The guidelines published by BOS time to time regarding conduction of laboratory assignments and Practical/Oral examination is mandatory.

Guidelines for Practical Examination

Both internal and external examiners should jointly set problem statements for practical examination. During practical assessment, the expert evaluator should give the maximum weightage to the satisfactory implementation of the problem statement. The supplementary and relevant questions may be asked at the time of evaluation to judge the student 's understanding of the fundamentals, effective and efficient implementation. The evaluation should be done by both external and internal examiners.

Suggested List of Laboratory Assignments

Group A Combinational Logic Design 1. Design (using truth table, K-map) and implementation of 4-bitBCD to Excess-3 and Excess-3 to BCD Code converters.

2. Design (using truth table, K-map) and implementation of 4 bit BCD adder & subtractor usingIC7483.

3. Implementation of logic functions using multiplexer IC 74153 & decoder IC 74138.

(Verification, cascading & logic function implementation)

Group B

Sequential Logic Design

- 1. Design (State diagram, state table & K map) and implementation of 3 bit Up and Down Asynchronous and Synchronous Counter using master slave JK flip-flop IC 7476.
- 2. Design and implementation of Modulo 'n' counter with IC7490.

Group C

Computer system management and access based

1. Study of i7 motherboard (CPU, Chipset, RAM, SATA HDD, Ports, PCI Bus and BIOS).

2. Study of Linux OS architecture (BIOS, Kernel, Shell) Using Linux Virtual Machine.

- 3. Study of Linux Partitions and Boot Loader.
- 4. Study Linux File System-(extended ver/3).
- 5. Learn file management commands like-Is, mkdir, cd, mv, rm, chmod, grep, pipes and filters.

Group D

Computer organization

- 1. Find various specifications of PC using window/Linux commands & CPU-Z software: CPU specifications, clockrate, main memory, cache memory.
- 2. Design& simulate anyone using virtual lab simulator:i) ALU or ii) CPU design .

Student should submit term work in the form of a journal based on the above assignments.

Practical examination will be based on the term work.

Questions will be asked during the examination to judge the understanding of the practical performed in the examination.

Candidate is expected to know the theory involved in the experiment.

- 4. The practical examination should be conducted if the journal of the candidate is completed in all respects and certified by concerned faculty and head of the department.
- 5. All the assignment mentioned in the syllabus must be conducted.

Guidelines for Lab /TW Assessment

- 6. Examiners will assess the term work based on performance of students considering the parameters such as timely conduction of practical assignment, methodology adopted for implementation of practical assignment, timely submission of assignment in the form of handwritten write-up along with results of implemented assignment, attendance etc.
- 7. Examiners will judge the understanding of the practical performed in the examination by asking some questions related to theory & implementation of experiments he/she has carried out.
- 8. Appropriate knowledge of usage of software and hardware such as compiler, debugger, coding standards, algorithm to be implemented etc. should be checked by the concerned faculty member(s).

Guidelines for Laboratory Conduction

The instructor is expected to frame the assignments by understanding the prerequisites, technological aspects, utility and recent trends related to the topic. The instructor may set multiple sets of assignments and distribute among batches of students. It is appreciated if the assignments are based on real world problems/applications.

The guidelines published by BoS time to time regarding conduction of laboratory assignments and Practical/Oral examination is mandatory. All the assignments should be conducted on multicore hardware and 64-bit open-source software.

Guidelines for Practical Examination

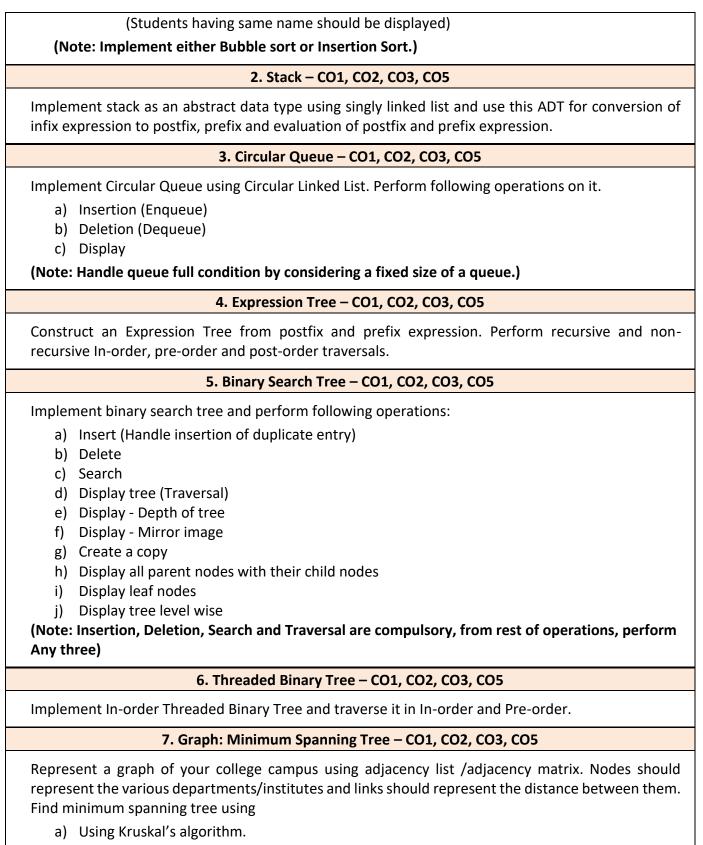

Both internal and external examiners should jointly set problem statements for practical examination. During practical assessment, the expert evaluator should give the maximum weightage to the satisfactory implementation of the problem statement. The supplementary and relevant questions may be asked at the time of evaluation to judge the student 's understanding of the fundamentals, effective and efficient implementation. The evaluation should be done by both external and internal examiners.

List of Assignments

1. Searching and Sorting – CO1, CO2, CO3, CO5

Consider a student database of SEIT class. Database contains different fields of every student like Roll No, Name and SGPA.

- a. Design a roll call list, arrange list of students according to roll numbers in ascending order (Use Bubble Sort)
- b. Arrange list of students according to name. (Use Insertion sort)
- c. Arrange list of students to find out first ten toppers from a class. (Use Quick sort)
- d. Search students according to SGPA. If more than one student having same SGPA, then print list of all students having same SGPA.
- e. Search a particular student according to name using binary search without recursion.

b) Using Prim's algorithm.

8. Graph: Shortest Path Algorithm – CO1, CO2, CO3, CO5

Represent a graph of city using adjacency matrix /adjacency list. Nodes should represent the various landmarks and links should represent the distance between them. Find the shortest path using Dijkstra's algorithm from single source to all destination.

9. Heap Sort - - CO1, CO2, CO4, CO6

Implement Heap sort to sort given set of values using max or min heap.

10. FILE Handling – CO1, CO3, CO5, CO6

Department maintains student's database. The file contains roll number, name, division and address. Write a program to create a sequential file to store and maintain student data. It should allow the user to add, delete information of student. Display information of particular student. If record of student does not exist an appropriate message is displayed. If student record is found it should display the student details.

| 1. Continuous assessment of assignments performance | - | ed on overall performance and lab | | | | | | | | | |

- 2. Each lab assignment assessment will assign grade/marks based on parameters with appropriate weightage.
- 3. Suggested parameters for overall assessment as well as each lab assignment assessment includetimely completion, performance, innovation, efficient codes, punctuality and neatness.

Guidelines for Practical Examination

Both internal and external examiners should jointly set problem statements. During practical assessment, the expert evaluator should give the maximum weightage to the satisfactory implementation of the problem statement. The supplementary and relevant questions may be asked at the time of evaluation to test the student's for advanced learning, understanding of the fundamentals, effective and efficient implementation. So encouraging efforts, transparent evaluation and fair approach of the evaluator will not create any uncertainty or doubt in the minds of the students.

Guidelines for Laboratory Conduction

The instructor is expected to frame the assignments by understanding the prerequisites, technological aspects, utility and recent trends related to the topic. The assignment framing policy need to address the average students and inclusive of an element to attract and promote the intelligent students. The instructor may set multiple sets of assignments without changing its complexity level and distribute among batches of students. Encourage students for the use of industry coding standards such as appropriate use of Hungarian notation, Indentation and comments. Use of open source software is encouraged. Set of suggested assignment list is provided.

Operating System recommended :- 64-bit Open source Linux or its derivative Programming tools recommended: - JAVA IDE

List of Assignments

1.Classes and object - CO1 and CO2

Design a class 'Complex 'with data members for real and imaginary part. Provide default and Parameterized constructors. Write a program to perform arithmetic operations of two complex numbers.

2. Polymorphism - CO3

Identify commonalities and differences between Publication, Book and Magazine classes. Title, Price, Copies are common instance variables and saleCopy is common method. The differences are, Bookclass has author and order Copies(). Magazine Class has orderQty, Currentissue, reciveissue().Write a program to find how many copies of the given books are ordered and display total sale of publication.

3.Inheritance - CO3

Design and develop inheritance for a given case study, identify objects and relationships and implement inheritance wherever applicable. Employee class with Emp_name, Emp_id, Address, Mail_id, and Mobile_no as members. Inherit the classes, Programmer, Assistant Professor, Associate Professor and Professor from employee class. Add Basic Pay (BP) as the member of all the inherited classes with 97% of BP as DA, 10 % of BP as HRA, 12% of BP as PF, 0.1% of BP for staff club fund. Generate pay slips for the employees with their gross and net salary.

4.Dynamic Binding - CO3

Design a base class shape with two double type values and member functions to input the data and compute_area() for calculating area of figure. Derive two classes' triangle and rectangle. Make compute_area() as abstract function and redefine this function in the derived class to suit their requirements. Write a program that accepts dimensions of triangle/rectangle and display calculated area. Implement dynamic binding for given case study.

5.Interface – CO1, CO3

Design and develop a context for given case study and implement an interface for Vehicles Consider the example of vehicles like bicycle, car, and bike. All Vehicles have common functionalities such as Gear Change, Speed up and apply breaks .Make an interface and put all these common functionalities. Bicycle, Bike, Car classes should be implemented for all these functionalities in their own class in their own way.

6.Exception handling – CO4

Implement a program to handle Arithmetic exception, Array Index Out Of Bounds.

The user enters two numbers Num1 and Num2. The division of Num1 and Num2 is displayed. If Num1 and Num2 were not integers, the program would throw a Number Format Exception. If Num2 were zero, the program would throw an Arithmetic Exception. Display the exception.

7.Template – CO4

Implement a generic program using any collection class to count the number of elements in a collection that have a specific property such as even numbers, odd number, prime number and palindromes.

8.File Handling- – CO5

Implement a program for maintaining a student records database using File Handling. Student has Student_id,name,Roll_no, Class, marks and address. Display the data for five students. i) Create Database ii)Display Database iii) Clear Records iv)Modify record v)Search Record

9.Case Study: – CO2, CO5

Using concepts of Object Oriented programming develop solution for any one application

- **1)** Banking solution contains following operations such as
 - 1. Create an account 2. Deposit money 3. Withdraw money 4. Honor daily withdrawal limit
 - 5. Check the balance 6. Display Account information.
- 2) Inventory management contains following operations such as
 - 1. List of all products 2. Display individual product information 3. Purchase 4. Shipping
 - 5. Balance stock6. Loss and Profit calculation.

10. Factory Design pattern – CO6

Design and implement Factory design pattern for the given context. Consider Car building process, which requires many steps from allocating accessories to final makeup. These steps should be written as methods and should be called while creating an instance of a specific car type. Hatchback, Sedan, SUV could be the subclasses of Car class. Car class and its subclasses, CarFactory and TestFactoryPattern should be

1. Strategy Design Patten – CO6

Implement and apply Strategy Design pattern for simple Shopping Cart where three payment strategies are used such as Credit Card, PayPal, BitCoin. Create the interface for strategy pattern and give concrete implementation for payment.

Krishnaswami, N. and Sriraman T. — Creative English for Communication , Macmillan **Guidelines for Student's Lab Journal and TW Assessment** Each student should have a Lab Workbook (sample workbook attached) which outlines each lab activity conducted. The student must respond by writing out their learning outcomes and elaborating the activities performed in the lab. Continuous assessment of laboratory work is to be done based on overall performance and lab assignments and performance of student. Each lab assignment assessment will be assigned grade/marks based on parameters with appropriate weightage. Suggested parameters for overall assessment as well as each lab assignment assessment include- timely completion, performance, punctuality, neatness, enthusiasm, participation and contribution in various activities-SWOC analysis, presentations, team activity, event management, group discussion, group exercises and interpersonal skills and similar other activities/assignments. **Guidelines for Conduction of Soft Skills Lab** The teacher may design specific assignments that can highlight the learning outcomes of each unit. Each activity conducted in the lab should begin with a brief introduction of the topic, purpose of the activity from a professional point of view and end with the learning outcomes as feedback from students. Most of the lab sessions can be designed to be inclusive; allowing students to learn skills experientially; which will benefit

them in the professional environment. Every student must be given sufficient opportunity to participate in each activity and constructive feedback from the instructor / facilitator at the end of the activity should learn towards encouraging students to work on improving their skills. Activities should be designed to respect cultural, emotional and social standing of students. Some of the activities can be designed to cater to enhancement of multiple skills – For eg – Team Building Activity can highlight 'open communication', 'group discussion', 'respecting perspectives', 'leadership skills', 'focus on goals' which can help students improve their inherent interpersonal skills.

At least 1 session should be dedicated to an interactive session that will be delivered by an expert from the industry; giving the students an exposure to professional expectations.

| industry; { | industry; giving the students an exposure to professional expectations. | | | |
|--|--|--|--|--|
| | Recommended List of Lab Sessions | | | |
| 1. Introd | luction of Self / SWOC Analysis [CO1, CO4] | | | |
| | Explain how to introduce oneself in a professional manner and presenting oneself positively Name Academic Profile Achievements Career Aspirations Personal Information (hobbies, family, social). Focus on introspection and become aware of one's Strengths, Weakness, Opportunities and | | | |
| | Challenges. | | | |
| | can write down their SWOC in a matrix and the teacher can discuss the gist personally. | | | |
| | r Goals and Planning [CO1, CO4] | | | |
| Students of to be succ b. Think and | Make students understand the difference between a job and a career. Elaborate steps on how to plan a career. can choose a career and they should write down what skills, knowledge, steps are need cessful in that particular career and how they can get the right opportunity. Explain to students how to plan short term and long term goals. I write down their short term goals and long terms goals. Teacher can read and provide basic counseling) about the choices written. | | | |
| 3. Public | : Speaking – (Choose any 2) [CO3, CO2] | | | |
| | Prepared Speech Topics are shared with students and they will be given 10 minutes to prepare and 3 minutes to deliver followed by Q&A from audience. Teacher can evaluate each student based on content, communication skills, logical and cohesive presentation of topic, perspective of student, ability to handle questions and respond positively. Extempore Speech | | | |
| | Various topics are laid out in front of the audience and each student is to pick one topic and speak about the topic for 5 minutes followed by Q&A from audience. Teacher can evaluate each student based on ability to think on his/her feet, content, communication skills, logical and cohesive presentation of topic, perspective of student, ability to handle questions and respond positively. | | | |
| C. | Reviewing an Editorial article Either using e-paper / printed copy, students have to select a recent editorial (that is non- controversial), read it and explain to the audience what the editor's perspective is and what the student's perspective is. | | | |
| | Book Review Each student will orally present to the audience his/her review of a book that he/she has recently read. | | | |
| 4. Group | Discussion | | | |
| a. | The class can be divided into groups of 8 – 10 students in for a discussion lasting 10 minutes. Topics can be topical and non-controversial. After each group finishes its discussion, the teacher can give critical feedback including areas of improvement. The teacher should act as a moderator / observer only | | | |
| | | | | |

| 5. | Listeni | ng and Reading Skills[CO2] |
|----|---------|--|
| | a. | Listening Worksheets to be distributed among students |
| | | Each student can be given specifically designed worksheets that contain blanks / matching / |
| | | MCQs that are designed to an audio (chosen by the faculty). Students have to listen to the |
| | | audio (only once) and complete the worksheet as the audio plays. This will help reiterate active |
| | | listening as well as deriving information (listening to information between the lines) |
| | b. | Reading Comprehension Worksheets to be distributed among students |
| | | Teacher can choose reading passages from non-technical domains, design worksheets with |
| | | questions for students to answer. This will enhance student's reading skills by learning how to |
| | | skim and scan for information. |
| 6. | | g Skills (Choose any 2) |
| | a. | Letter / Email Writing |
| | | After explaining to the students the highlights of effective writing, students can be asked to |
| | | write (using digital platforms / paper-based) letter to an organization with the following subject |
| | | matter, |
| | | requesting opportunity to present his/her product. |
| | | ii. complaining about a faulty product / service. |
| | | iii. apologizing on behalf of one's team for the error that occurred . |
| | | iv. providing explanation for a false accusation by a client. |
| | b. | Report Writing |
| | | After describing various formats to write report and explaining how to write a report, each |
| | | student should be asked to write a report (digital / paper-based) on any of the following topics, |
| | | i. Industrial visit. |
| | | ii. Project participated in. |
| | | iii. Business / Research Proposal. |
| | с. | Resume Writing |
| | | The teacher should conduct a brief session outlining the importance of a CV / Resume and |
| | | students can write / type out their own resumes, |
| | | i. Share various professional formats. |
| | | ii. Focus on highlighting individual strengths. |
| | | iii. Develop personalized professional goals / statement at the beginning of the |
| | | resume. |
| 7. | Team | Building Activities [CO3, CO4] |
| | ream | The class can be divided into groups of 4-5 students in each group and an activity can be given to |
| | | each group. |
| | | The activities chosen for each team should be competitive and should involve every student in |
| | | the team. The activities can be conducted indoors or outdoors depending on infrastructure. |
| | | Advice – While selecting the team ensure that each team has a mix of students who have varied |
| | | skills so as to not give any one team an advantage. The teacher can give critical feedback |
| | | including areas of improvement at the end of the activity. |
| 8. | Expert | Lecture [CO4] |
| | | Highlighting the need to manage stress and time, experts from the fields of health and fitness, |
| | | counseling, training, medical or corporate HR can be invited to deliver a participatory session that |
| | | focus on helping students to cope with parental, social, peer and career pressures. |
| 9. | Latera | l and Creative Thinking |
| - | | |

| ery student needs to step out of the linear thinking and develop lateral and creative thinking acher can develop creative activities in the classroom / lab that will help students enhance their eative thinking. Some of the suggested activities, i. Each group (3-4 students) can be given random unrelated items and they will be given 20 mins to come up with creative ideas on how the objects can be used for activities, |
|--|
| purposes other than its intended one. ii. Each student is given a random line and he/she has to spin a fictional story and tell it to the class (3 minutes). Each story should have a beginning, middle and end. iii. Each group (3-4 students) can be given a fictional / hypothetical dangerous situation and they have to find a solution to that problem. They can present it to the other teams who will then get the opportunity to pick flaws in the ideas. |
| erviews [CO2, CO3] |
| udent has to undergo this session and the teacher should seek the assistance of another faculty ember / TPO Officer to act as interview panel. Students will be informed beforehand about the p profile that they are appearing the interview for and they have to come prepared with a inted copy of their resume, formally dressed. Questions will include technical as well as HR culty can choose to give problems that students have to solve using their technical skills udents will be graded on the basis of their technical knowledge, ability to answer questions ell, presentation of self, body language and verbal skills. |
| ion Skills [CO2, CO3] |
| ery student will have to choose a topic of his/her choice and make a 5-minute presentatior ing audio-video aids / PPT. The topic can either be technical or non-technical. Focus and aluation of each presentation should be the depth of knowledge about the topic, originality of rspective on the topic, well-researched or not, verbal and non-verbal skills and ability to answer estions effectively. Plagiarism should be discredit and students should be warned about it. |
| e and Business Etiquette |
| e teacher can design an interactive session that allows students to be involved in understanding e requirements of a corporate environment. This can be done using innovative quiz mpetition in the classroom and the teacher explaining the concept / relevance of that particular pect in the professional context. Alternatively, the teacher can invite professionals to have an ceractive session with students about various aspects of professional etiquette. |

SEMESTER - II

| Savitribai Phule Pune University, Pune Second Vear Information Technology (2018 Course) | | | | | | |
|---|---|--|--|--|--|--|
| Second Year Information Technology (2019 Course) 207003: Engineering Mathematics III | | | | | | |
| Teaching Scheme: | | | | | | |
| TH : 03 Hr/week | 03 Mid_Semester: 30Marks | | | | | |
| TUT : 01 Hr/ week | 01 | End Semester: 70Marks | | | | |
| | TW : 25Marks | | | | | |
| Prerequisites: Differential & Integral calculus, Taylor series, Differential equations of first order and first | | | | | | |
| degree, Fourier series, Collection, Classification and Representation of data. | | | | | | |
| Course Objectives: | | | | | | |
| | with concepts and techniques | in Linear differential equations, Fourier | | | | |
| | | and Numerical methods. The aim is to | | | | |
| | | I mathematics and its applications that | | | | |
| would enhance thinking power, u | | | | | | |
| Course Outcomes: | · · · · · · · · · · · · · · · · · · · | | | | | |
| At the end of this course, student | s will be able to | | | | | |
| CO1: Solve Linear differentia | I equations, essential in mo | delling and design of computer-based | | | | |
| systems. | | | | | | |
| CO2: Apply concept of Fourie | er transform and Z-transform | and its applications to continuous and | | | | |
| discrete systems and image pr | ocessing. | | | | | |
| CO3: Apply Statistical method | s like correlation& regression | analysis and probability theory for data | | | | |
| analysis and predictions in ma | chine learning. | | | | | |
| CO4: Solve Algebraic & Transc | endental equations and Syste | em of linear equations using numerical | | | | |
| techniques. | | | | | | |
| | | tion and integration, numerical solutions | | | | |
| of ordinary differential equation | | omputing. | | | | |
| | Course Contents | | | | | |
| Unit I | Linear Differential Equation | Unit I Linear Differential Equations 08 Hrs (LDE | | | | |
| | | | | | | |
| LDE of n th order with constant coefficients, Complementary function, Particular integral, General method, | | | | | | |
| | | | | | | |
| Short methods, Method of var | fficients, Complementary funct | ion, Particular integral, General method, /'s & Legendre's DE, Simultaneous & | | | | |
| Short methods, Method of var Symmetric simultaneous DE. | fficients, Complementary funct iation of parameters, Cauchy | /'s & Legendre's DE, Simultaneous & | | | | |
| Short methods, Method of var Symmetric simultaneous DE. Unit I | fficients, Complementary funct | /'s & Legendre's DE, Simultaneous & 08 Hr | | | | |
| Short methods, Method of var Symmetric simultaneous DE. Unit I Unit II: Transforms | fficients, Complementary funct iation of parameters, Cauchy Transforms | r's & Legendre's DE, Simultaneous & 08 Hr (08 Hours) | | | | |
| Short methods, Method of var Symmetric simultaneous DE. Unit I Unit II: Transforms Fourier Transform (FT): Complex | fficients, Complementary funct iation of parameters, Cauchy Transforms exponential form of Fourier s | r's & Legendre's DE, Simultaneous & 08 Hr (08 Hours) eries, Fourier integral theorem, Fourier | | | | |
| Short methods, Method of var Symmetric simultaneous DE. Unit I Unit II: Transforms Fourier Transform (FT): Complex Sine & Cosine integrals, Fourier tr | fficients, Complementary funct iation of parameters, Cauchy Transforms exponential form of Fourier s | r's & Legendre's DE, Simultaneous & 08 Hr (08 Hours) eries, Fourier integral theorem, Fourier | | | | |
| Short methods, Method of var Symmetric simultaneous DE. Unit I Unit II: Transforms Fourier Transform (FT): Complex Sine & Cosine integrals, Fourier tr Fourier Transform. | fficients, Complementary funct iation of parameters, Cauchy Transforms exponential form of Fourier s ransform, Fourier Sine & Cosine | y's & Legendre's DE, Simultaneous & 08 Hr (08 Hours) eries, Fourier integral theorem, Fourier e transforms and their inverses, Discrete | | | | |
| Short methods, Method of var Symmetric simultaneous DE. Unit I Unit II: Transforms Fourier Transform (FT): Complex Sine & Cosine integrals, Fourier tr Fourier Transform. Z - Transform (ZT):Introduction, | fficients, Complementary funct iation of parameters, Cauchy Transforms exponential form of Fourier s ransform, Fourier Sine & Cosine Definition, Standard propertie | y's & Legendre's DE, Simultaneous & 08 Hr (08 Hours) eries, Fourier integral theorem, Fourier e transforms and their inverses, Discrete | | | | |

| | | End_Semester: 70Marks | | | | | | |
| Prerequisite Courses, if any: Basi | c Geometry, Trigonometry, Vecto | ors and Matrices. Data Structures | | | | | | |

Prerequisite Courses, if any: Basic Geometry, Trigonometry, Vectors and Matrices, Data Structures and Algorithms

Course Objectives:

- 1. Understand the foundations of computer graphics: hardware systems, math basis, light and color.
- 2. Understand the complexities of modeling realistic objects through modeling complex scenes using a high-level scene description language.
- 3. Become acquainted with some advanced topics in computer graphics. The student should gain an expanded vocabulary for discussing issues relevant to computer graphics (including both the underlying mathematics and the actual programming).
- 4. The student should gain an appreciation and understanding of the hardware and software utilized in constructing computer graphics applications.
- 5. The student should gain a comprehension of windows, clipping and view-ports in relation to images displayed on screen.
- 6. The student should gain an understanding of geometric, mathematical and algorithmic concepts necessary for programming computer graphics.

Course Outcome: (COs)

On completion of the course, learner will be able to-

CO1: Specify mathematical and logical aspects for developing elementary graphics operations like scan conversion of points, lines and circle and apply it for problem solving.

CO2: Explain and employ techniques of geometrical transforms to produce, position and manipulate objects in 2 dimensional and 3-dimensional space respectively.

CO3: Describe mapping from a world coordinates to device coordinates, clipping, and projections in order to produce 3D images on 2D output device.

CO4: Apply the concepts of rendering, shading, animation, curves and fractals using computer graphics tools in design, development and testing of 2D, 3D modeling applications.

CO5:Develop the competency to understand the concepts related to Virtual reality

Course Contents

| | Unit – 1 | Computer Graphics Basic, OpenGL and Line, Circle Drawing | 06 Hours |
|--|----------|--|----------|
|--|----------|--|----------|

Introduction CG :Introduction to computer graphics, basics of graphics systems, raster and random scan, basic display processor

OpenGL – Introduction – Graphics function, OpenGL Interface, primitives and attributes, Control functions, programming events.

| Line Drowing: DDA Lin | ne – Mathematical Treatment and algorithm, Bresenhem Line | Mathematical |
|--|--|-------------------|
| Treatment and algorit | | |
| - | nhem – Mathematical Treatment and algorithm. | |
| • | : Stroke principle, starburst principle, bitmap method.Introdu | ction to aliasing |
| and anti-aliasing. | . Stroke principle, starburst principle, bitmap method.introdu | |
| Case study | Computer-generated imagery (CGI) | |
| Mapping of Course | CO1 | |
| Outcomes for Unit I | | |
| Unit – 2 | Polygons, 2D Transformations | 06 Hours |
| | id its types, inside test, | |
| | ls: 1. Seed Fill – Flood fill and Boundary Fill, Scan-line Fill algori | thms. |
| | Translation, Scaling, Rotation, Reflection and Shearing, Matrix | |
| | ordinate system, composite transformations. | |
| _ | | |
| Case study | Transformation of an Object in Computer Graphics: Mathe Matrix Theory | ematical |
| Mapping of Cours | | |
| Outcomes for Unit II | | |
| Unit – 3 | Windowing, Clipping, 3D Transformation, Projections | 06 Hours |
| Windowing: Concept | of window and viewport, viewing transformations | |
| • | Sutherland method of line clipping | |
| | nerland Hodgeman method for convex and concave polygon c | ipping. |
| 3D Transformation : T | ranslation, scaling, rotation about X, Y, Z & arbitrary axis, and i | eflection about |
| XY, YZ, XZ & arbitrary | plane. | |
| Projections: Types of | projections – Parallel – Perspective | |
| Parallel: oblique – Cav | valier, Cabinet, Orthographic – isometric, diametric, trimetric | |
| Perspective: vanishing | g points as 1 point, 2 point and 3 point. | |
| Case Study | 3D Rendering and Modelling | |
| Manning of Course | | |
| Mapping of Course Outcomes for Unit III | e CO2 & CO3 | |
| Unit – 4 | Segments, Illumination models, colour models and | 06 Hours |
| 01111 - 4 | shading | 00 Hours |
| Segments: Introductio | on, Segment table, segment creation, closing, deleting, renamir | g and visibility |
| - | ight sources, ambient light, diffuse light, specular reflection, th | |
| | specular reflections with multiple light sources. | er nong mouel, |
| | omaticity Diagram, Color Gamut, RGB, CMY, YIQ, CMY, HSV, HI | S color models |
| | Constant intensity shading, Halftone, Gaurand and Phong Shad | |
| Case study | Best practices in Daylighting & Passive Systems for Smal | - |
| | Buildings | |
| Mapping of Cours | | |
| Outcomes for Unit IV | | |
| | | |

| Unit – 5 | Curves, fractals and Animation | 06 Hours |
|---|--|-------------------|
| Curves: Introduction, in | terpolation and approximation, Spline Interpolation Metl | nods – hermite |
| interpolation, Bezier cur | | |
| • | Classification, fractal Dimension, Fractal dimension and s | urfaces, Hilbert |
| curve, Koch Curve. | | |
| | imation, types of animation, principles of animation, desig | n of animation |
| | nguages, key frame, morphing, motion specification. | |
| • | animation, frame-by-frame animation techniques, real- | time animation |
| techniques. | | |
| Case study | 3D Animation services for character expressions. | |
| Mapping of Course | CO4 | |
| Outcomes for Unit V | | |
| Unit – 6 | Virtual Reality | 06 Hours |
| Introduction of Virtual | Reality: Fundamental Concept, Three I's of virtual rea | lity and Classic |
| Components of VR syste | ms, Applications of VR systems. | |
| Multiple Modals of Inpu | it and Output Interface in Virtual Reality: Input – 3D position | on Trackers and |
| its types, Navigation and | Manipulation Interfaces, Gesture Interfaces, Graphics Disp | lays – HMD and |
| CAVE, Sound Displays, H | aptic Feedback | |
| Rendering Pipeline: Gra | aphics rendering Pipeline, Haptics Rendering Pipeline Mod | leling in Virtual |
| Reality: Concepts of Ge | ometric Modeling, Kinematic Modeling, Physical modelin | g and Behavior |
| modeling. | | |
| Case Study | Virtual reality in aviation and Space travel Training | |

| Teaching Scheme: | Credit | Examination Scheme |
| TH:02Hr/week | 01 | TW: 25Marks |
| | | PR: 25Marks |
| Prerequisites: Computer Organizati | on and Architecture | |
| Course Objectives : | | |
| | amming and PIC18FXXXmicrocontrol | |
| | world input and output devices to PIC | C18FXXX microcontroller |
| Course Outcomes : | | |
| CO1 : After completion of this c | | |
| · | ots related to embedded C programm | • |
| | rite and execute embedded C program | m to perform array addition, |
| block transfer, sorting operation | learn interfacing of real world in | nut and output devices to |
| PIC18FXXX microcontroller. | learn interfacing of fear world in | put and output devices to |
| | open source prototype platform | like Raspherry-Pi/Reagle |
| board/Arduino. | | ince haspberry rybeagie |
| Guidelines for Instructor's Manual | | |
| | the laboratory manual for all the exp | eriments and it should be made available |
| | r/Assistant. The instructor's manual s | |
| | uidelines, topics under consideration | |
| algorithm, sample test cases and refe | - | |
| | Guidelines for Student's Lab Jour | nal |
| 1. The laboratory assignments | are to be submitted by student in th | e form of journal. The Journal consists of |
| prologue, Certificate, table | of contents, and handwritten write- | up of each assignment (Title, Objectives, |
| Problem Statement, Outco | mes, software & Hardware require | ments, Date of Completion, Assessment |
| grade/marks and assessor's | sign, Theory- Concept, circuit diagrar | n, pin configuration, conclusion/analysis), |
| printouts of the code writte | n using coding standards, sample tes | t cases etc. |
| 2. Practical Examination will b | e based on the term work submitted | by the student in the form of journal |
| | ow the theory involved in the experi | |
| - | - | the candidate is completed in all respects |
| • | faculty and head of the department | |
| 5. All the assignment mention | ed in the syllabus must be conducted | |
| | Guidelines for Lab /TW Assessme | |
| | | mance of students considering the |
| - | | ignment, methodology adopted for |
| implementation of prac | tical assignment, timely submis | sion of assignment in the form of |
| handwritten write-up alo | ng with results of implemented as | signment, attendance etc. |
| 2. Examiners will judge the | understanding of the practical pe | rformed in the examination by asking |
| some questions related to | theory & implementation of exp | oriments he/she has carried out |

3. Necessary knowledge of usage of software and hardware of PIC18FXXX microcontrollers and its interfacing kits should be checked by the concerned faculty members.

Guidelines for Laboratory Conduction

- 1. The instructor is expected to frame the assignments by understanding the prerequisites, technological aspects, utility and recent trends related to the topic. The instructor may set multiple sets of assignments and distribute among batches of students. It is appreciated if the assignments are based on real world problems/applications.
- 2. The guidelines published by BOS time to time regarding conduction of laboratory assignments and Practical/Oral examination is mandatory.

Guidelines for Practical Examination

Both internal and external examiners should jointly set problem statements for practical examination. During practical assessment, the expert evaluator should give the maximum weightage to the satisfactory implementation of the problem statement. The supplementary and relevant questions may be asked at the time of evaluation to judge the student's understanding of the fundamentals, effective and efficient implementation. The evaluation should be done by both external and internal examiners.

Suggested List of Laboratory Assignments

Suggested List of Laboratory Assignments Group A (Any Three):

Mapping of Course Outcomes for Group A : CO1, CO2

- 1. Write an Embedded C program to add array of n numbers.
- 2. Write an Embedded C program to transfer elements from one location to another for following.I) Internal to internal memory transfer
 - II) Internal to external memory transfer
- 3. Write an Embedded C menu driven program for
- i) Multiply 8 bit number by 8 bit number
- ii) Divide 8 bit number by 8 bit number
- 4. Write an Embedded C program for sorting the numbers in ascending and descending order.

Group B (Any Three):

Mapping of Course Outcomes for Group B : CO3

- 5. Write an Embedded C program to interface PIC 18FXXX with LED & blinking it using specified delay.
- 6. Write an Embedded C program for Timer programming ISR based buzzer on/off.
- 7. Write an Embedded C program for External interrupt input switch press, output at relay.
- 8. Write an Embedded C program for LCD interfacing with PIC 18FXXX.

Group C (Any two) :

Mapping of Course Outcomes for Group C : CO3

9. Write an Embedded C program for Generating PWM signal for servo motor/DC motor.

- 10. Write an Embedded C program for PC to PC serial communication using UART.
- 11. Write an Embedded C program for Temperature sensor interfacing using ADC & display on LCD.

Group D :

Mapping of Course Outcomes for Group D : CO4

12. Study of Arduino board and understand the OS installation process on Raspberry-pi .

13. Write simple program using Open source prototype platform like Raspberry-Pi/Beagle board/Arduino for digital read/write using LED and switch Analog read/write using sensor&actuators.

- 1. Examiners will assess the student based on performance of students considering the parameters such as timely conduction of practical assignment, methodology adopted for implementation of practical assignment, timely submission of assignment in the form of handwritten write-up along with results of implemented assignment, attendance etc.
- **2.** Examiners will judge the understanding of the practical performed in the examination by asking some questions related to theory & implementation of experiments he/she has carried out.
- **3.** Appropriate knowledge of usage of software and hardware related to respective laboratory should be checked by the concerned faculty member.

Suggested List of Laboratory Assignments

Group A: Study of Databases

Mapping of Course Outcomes Group A: CO1

- 1. Study of MySQL Open source software. Discuss the characteristics like efficiency, scalability, performance and transactional properties
- 2. Install and configure client and server of MySQL.(Show all commands and necessary steps for installation and configuration)
- 3. Study of SQLite: What is SQLite? Uses of Sqlite. Building and installing SQLite.

Group B: MySQL

Mapping of Course Outcomes Group B: CO2, CO3, CO4, CO5

- 1. Design any database with at least 3 entities and relationships between them. Draw suitable ER/EER diagram for the system.
- 2. Design and implement a database (for assignment no 1) using DDL statements and apply normalization on them
- 3. Create Table with primary key and foreign key constraints.
 - a. Alter table with add n modify b. Drop table
- 4. Perform following SQL queries on the database created in assignment 1.
 - Implementation of relational operators in SQL
 - Boolean operators and pattern matching
 - Arithmetic operations and built in functions
 - Group functions
 - Processing Date and Time functions
 - Complex queries and set operators
- 5. Execute DDL/DML statements which demonstrate the use of views. Try to update the base table using its corresponding view. Also consider restrictions on updatable views and perform view creation from multiple tables.

Group C: PL/SQL

Mapping of Course Outcomes Group C: CO6

- 1. Write and execute PL/SQL stored procedure and function to perform a suitable task on the database. Demonstrate its use.
- 2. Write and execute suitable database triggers .Consider row level and statement level triggers.
- 3. Write a PL/SQL block to implement all types of cursor.

Group D: Relational Database Design

Mapping of Course Outcomes Group D: CO5, CO6

Design and case study of any organization (back end only), Project Proposal and High Level SRS To prepare for your project, do the following:

- 1. Form teams of around 3 to 4 people
- 2. Create a requirements document with the following information;
- 1. Give a one or two paragraph description of your goals for the topic(s).
- 2. List all what all types of users will be accessing your application (e.g., for moodle, the types are teachers, students, teaching assistants, and a few more types).
- 3. List the various functionalities that your application will support. Explain each in about a paragraph worth of detail.
- 4. List the hardware and software requirements at the backend and at the front end.
- 5. Give an estimate of the number of users of each type, the expected load (transactions per day), and the expected database size.

Project ER Diagram and Database Design

For ER diagram and Database design following guidelines can be used

- 1. Draw an ER diagram of your project.
- 2. Reduce this ER diagram into the tables and complete database design.
- 3. Subsequently, list all the functional dependencies on each table that you expect will hold.
- 4. Check that the database schema is in 3NF/BCNF. If it is not, apply normalization. Use non-loss decomposition and bring the database schema in 3NF/BCNF.

Give the ER diagram and the data dictionary as part of the requirement specifications file which you created for the project proposal.

| 2. Examiners will judge the u | nderstanding of the practical perfo | ormed in the examination by asking |
| some questions related to | theory & implementation of expe | riments he/she has carried out. |
| 3. Appropriate knowledge of | usage of software and hardware r | related to respective laboratory should |
| | | |

| Guidelines for Laboratory Conduction |
|---|
| 1. All the assignments should be implemented in C++ with OpenGL libraries. |
| 2. Assignment 1 (week 1) should all the basic functions of openGL to get students familiar with |
| Graphics Environment. Hence, this assignment is not included in Practical Exam. |
| 3. The different objects/shapes/patterns should be drawn for implementation of drawing algorithm. |
| 4. All the assignments should explore the conceptual understanding of students. |
| 5. The keyboard/Mouse interfaces should be used wherever possible. |
| Guidelines for PRACTICAL EXAM conduction |
| 1. There will be 2 problem statements in chit and student will have to perform any one. |
| 2. All the problem statements carry equal weightage. |
| Suggested List of Laboratory Assignments |
| Install and explore the OpenGL (1 week, 2 hrs) - CO1 |
| 2. Implement DDA and Bresenham line drawing algorithm to draw (2 week, 4 hrs) |
| i) Simple line |
| ii) Dotted line |
| iii) Dashed line |
| iv) Solid line |
| using mouse interface. Divide the screen in four quadrants with center as (0, 0). The line should |
| work for all the slopes +ve, -ve, >1,<1 |
| 3. Implement Bresenham circle drawing algorithm to draw any object. The object should be displayed in |
| all the quadrants with respect to center and radius (1 week, 2 hrs) -CO2 |
| 4. Implement the following polygon filling methods (1 week, 2 hrs) |
| i) Flood fill / Seed fill |
| ii) Boundary fill |
| using mouse click, keyboard interface and menu driven programming-CO4 |
| 5. Implement Cohen Suterland polygon clipping method to clip the polygon with respect the viewport |
| and window. Use mouse click, keyboard interface (1 week, 2 hrs) - CO4 |
| 6. Implement following 2D transformations on the object with respect to axis (1 week, 2 hrs) – CO5 |
| a. Scaling |
| b. Rotation about arbitrary point |
| c. Reflection |
| 7. Generate fractal patterns using (1 week, 2 hrs) |
| a. Bezier b. Koch Curve |
| 8. Implement animation principles for any object (2 week, 4 hrs) -CO6 |

|-------------------------------|------------------------|---------------------|
| Second Year I | nformation Technolog | gy (2019 Course) |
| 214 | 458: Project Based Lea | arning |
| Teaching Scheme: | Credit | Examination Scheme: |
| Lab: 04hrs. / week | 02 | TW : 50Marks |
| Prereguisite Courses, if any: | JL | |

- 1. The primary objective of project-based learning course is to develop critical thinking and engineering problem solving skills by exploring and proposing sustainable solutions to real-world problems.
- 2. PBL requires continuous mentoring by faculty throughout the semester for successful completion of the tasks selected by the students per batch. While assigning the teaching workload a load of 2 Hrs./week/batch needs to be considered for the faculty involved. This course specifically utilizes Project Based Learning (PBL) to engage students in a semester long process of analyzing, evaluating, and creating solutions to an engineering real-world problem. These projects assist students in learning important domain knowledge, technical content, and develop needed skills in critical thinking, teamwork, peer evaluation, and communications.
- 3. Students will work on their project from a first week to a semester end that engages them in solving a real-world problem or answering a complex question. The Batch needs to be divided into sub-groups of 3 to 6 students. Assignments / activities / models/ projects etc. under project based learning is carried throughout semester and Credit for PBL has to be awarded on the basis of internal continuous assessment and evaluation at the end of semester. A mentor will assign to every team who will be guided them to build their projects.

Companion Course, if any: Online courses relevant to the project, along with expert lecture on Intellectual right and patients.

Course Objectives :

After completing PBL course, the student will be able to:

- 1. Know about project and project based learning
 - Experience the concept of learning by doing,
 - Experience advanced and efficient learning model
- 2. Understand the various processes involved in project based learning and the importance of team work in project based learning
 - develop projects for various real life situations,
 - work in realistic contextualized problem-solving environments,
 - realize the success of a project by experiencing the desired output
- 3. Apply knowledge and understanding of project based learning processes in new situations
 - improve communication skills,
 - enhance self-confidence,
 - build up teamwork and leadership skills

4 Model to meet the societal and educational demands

Solving challenges of society through technology

Probable solution for various problems coming from various Hackathon competitions

Course Outcomes:

On completion of the course, learner will be able to:

CO1: Students will gain knowledge of how to provide solution to real life problems and analyze its concerns

through shared cognition.

CO2: Students will be able to understand concepts of various disciplines and apply them in practical way.

CO3: Learning by doing approach in PBL will promote long-term retention of material and replicable skill. **CO4:** Becoming well prepared for the labor market.

CO5: Student will motivate to collaborate with external partners and engage in interdisciplinary learning environments

Course Contents

Group Structure:

Working in supervisor/mentor –monitored groups. The students plan, manage and complete a task/project / activity, which addresses the stated problem.

1. There should be team of 3 to 6 students who will work cohesively .

2. A Mentor should be assigned to individual groups who will help them with learning process

Selection of Project/Problem:

The project-based project model begins with the identifying of a real-world problem, often growing out of a question or "wondering". The formulated problem will then stands as the starting point for learning. Students will be designed and analyze the problem within an articulated interdisciplinary or subject frame. A problem statement can be theoretical, practical, social, technical, symbolic, cultural and/or scientific and grows out of students' wondering within different disciplines and professional environments. A chosen problem has to be exemplary. The problem may involve an interdisciplinary approach in both the analysis and solving phases.

By exemplarity, a problem needs to refer back to a particular practical, scientific, social and/or technical domain. The problem should stand as one specific example or manifestation of more general learning outcomes related to knowledge and/or modes of inquiry.

There are no commonly shared criteria for what constitutes an acceptable project. Projects vary greatly in the depth of the questions explored, the clarity of the learning goals, the content and structure of the activity.

1. A few hands-on activities that may or may not be multidisciplinary

2. Use of technology in meaningful ways to help them investigate, collaborate, analyze synthesize and present their learning.

3. Activities may include- Solving real life problem , investigation /study and Writing reports of in depth study, fieldwork

4. Reports of in depth study, fieldwork

Assessment:

The department should committed to assessing and evaluating both student performance and program effectiveness.

Progress of PBL will be monitored regularly on weekly basis. Weekly review of the work is necessary. During process of monitoring and continuous assessment AND evaluation the individual and team performance is to be measured. PBL is to be monitored and continuous assessment should be done by mentor and authorities.

Students must maintain an institutional culture of authentic collaboration, self- motivation, peer-learning and personal responsibility. The institution/department should support students in this regard through guidance/orientation programs and the provision of appropriate resources and services. Supervisor/mentor and Students must actively participate in assessment and evaluation processes. Group may demonstrate their knowledge and skills by developing a public product and/or report and/or presentation.

1. Individual assessment for each student (Understanding individual capacity, role and involvement in the project).

2. Group assessment (roles defined, distribution of work, intra-team communication and togetherness.

3. Documentation and presentation.

Evaluation and Continuous Assessment:

Project Based Learning is an instructional approach that emphasizes critical-thinking, collaboration and personalized learning. These projects are based on problems, which are real-life oriented, curriculumbased, and often interdisciplinary. At the end of the PBL, students demonstrate their newly acquired knowledge and are evaluated by how much they have learned and how well they communicate it. Throughout this process, the teacher's role is to guide and advise students, rather than to direct and manage student work.

It is recommended that the all activities are to be recorded, regular assessment of work to be done and proper documents are to be maintained at college end by both students as well as mentor (you may call it PBL work book).

Continuous Assessment Sheet (CAS) is to be maintained by all mentors/department and institutes. Recommended parameters for assessment, evaluation and weightage :

- 1. Idea Inception (5%)
- 2. Outcomes of PBL/Problem Solving Skills/Solution provided/Final product (40%) (Individual assessment and team assessment)
- 3. Documentation (Gathering requirements, design & modeling, implementation/execution, use of technology and final report, other documents (25 %)

4. Potential for the patient (10%)

5.Demonstration (Presentation, User Interface, Usability etc.) (10%)

6. Contest Participation/ publication (5%)

7. Awareness /Consideration of Environment/ Social /Ethics/ Safety measures/Legal aspects (5%).

PBL workbook will serve the purpose and facilitate the job of students, mentor and project coordinator.

This workbook will reflect accountability, punctuality, technical writing ability and work flow of the work undertaken

SUGGESTED LIST OF CASE STUDIES/STUDENTACTIVITIES

1. Collect the information about biotic and abiotic components of surrounding environment and frame

relation among them.

- 2. Estimatethetotalquantityofwaterrequiredforatown/locality/Institute.
- 3. Prepare map and written report for surface and underground sources of water in the neighborhood
- 4. Visit nearby Certified Water testing laboratories and identify various tests conducted on water.
- 5. Visit Water Treatment Plant and collect details of unit operations and processes involved init.
- 6. Study the distribution system of water supply of your locality.
- 7. Visit a newly constructed building and study plumbing work.
- 8. Study a rooftop rain water harvesting system of existing building.
- 9. Study a Solar water heating system and collect necessary data.
- 10. Collect a necessary data/information about issues related to water pollution and Prepare report/presentation.

Evaluation:

Students should select any one of the above topic in a group of 3 to 5. Students should submit a written report and make a presentation on the topic. The task should not be repeated among students. Report will be evaluated by the faculty as per rubrics defined by him/her/them at start of course.

| | | |
| Teaching Sche | me: Credit | Examination Scheme: |
| 1 Hr/ weel | Audit Course | Audit Course |
| Prerequisite Courses: A | udit Course 3: Language Study Japanese: Module-I | |
| Course Objectives: | | |
| 1. To develop the Ja | panese communicative competence of students wit | h small sentence formation to |
| make primitive so | ocial conversation in Japanese | |
| 2. To enable studen | ts with comprehension ability of Japanese grammar | |
| 3. To enable studen | ts to translate simple conversations from English to . | Japanese and vice a versa |
| 4. To make student | aware about Japanese Culture and Customs | |
| Course Outcomes: | | |
| On completion of the co | urse, learner will be able to- | |
| CO1: Have Japanese (| Communicative competence for primitive Social conv | versation in Japanese |
| CO2:Comprehend Gr | ammar of Japanese Script | |
| CO3:Translate simple | e sentences from Japanese to English and vice a versa | Э |
| CO4:Be aware about | Japanese society and people | |
| | Course Contents | |
| Unit I | Japanese Conversation | (02 Hrs +04 Hrs Self Study) |
| Oral practice of convers | ation in situations such as declining an invitation, r | eporting an event, narrating a |
| story, short formal speed | hes on occasions such as welcoming, introducing and | thanking a guest, talking about |
| Japanese and Indian fest | ivals, hostel life etc | |
| Mapping of Course | CO1 | |
| Outcomes for Unit I | | |
| Unit II | Japanese Text and Kanji | (04 Hrs +04 Hrs Self Study) |
| Diverse texts based on Ja | panese culture, customs, history, food habits, and sc | ience etc, for the development |
| of communicative com | petence of students; skimming, scanning of texts | with emphasis on advanced |
| sentence patterns, gran | matical structures and idiomatic phrases, reading | and writing of approximately |
| 400 <i>kanji</i> . | | |
| Mapping of Course | CO2,CO3 | |
| Outcomes for Unit II | | |
| Unit III | Japanese Grammar and Composition | (02 Hrs +04 Hrs Self Study) |
| Basic sentence patterns | to be applied in self introduction, identifying thing | s; time of the day; calendar; |
| | e numerical classifiers; describing things; making o | comparisons: talking of daily |
| counting using Japanese | | |
| | used for address and reference; seasons; giving and | |
| | used for address and reference; seasons; giving and | |
