**6. Name of Event Coordinator:** Dr. Raju Kumar Thakur, Dr. Abhishek Pratap Singh & Prof. Pratap Garudkar

**7. Event Objectives & Outcomes**

➤ **Objectives of Activity:** To understand the fabrication & testing methods of FRP composite

➤ **Outcomes of Activity:** To learn the basics of FRP composite & its various application

**8. Description of Event:** This faculty development program covered the various aspects of fabrication and characterization of fiber reinforced polymer composite.

**Day 1:** Introduction to fiber reinforced polymer (FRP) composite

Day 1 sessions were taken by Dr. Anand Gaurav, Assistant Professor, SRM University Haryana, and Dr. Raju Kumar Thakur, Assistant Professor, Sandip Institute of Technology & Research Center Nashik, Maharashtra. This session covers the types of fiber and matrices and their properties, ply orientation and stacking of plies of symmetric and asymmetric laminate.

**Day 2: Quasi-static characterization of FRP composite & Service life of FRP components**

Day 2 sessions were taken by Dr. Anand Gaurav, Assistant Professor, SRM University Haryana, and Dr. Touhid Alam Ansari, Project Research Scientist, Department of Aerospace Engineering, Indian Institute of Technology Bombay. This session covers the mechanical characterization such as tensile, flexural and interlaminar shear strength of composites. The most important test that composite materials need to pass is the fatigue behavior test. Fatigue testing is the sole way to determine a material's endurance limit because it evaluates a material's cyclic behavior, usually at a steady rate. To ascertain its fatigue behavior, FRP composites that were produced using diverse procedures and turned into a range of final products were assessed under cyclic loads until they failed or reached a certain percentage of total stiffness loss.

**Day 3: Impact Testing of FRP composite**

Day 3 sessions were taken by Dr. Mahesh, Postdoc Researcher, Indian Institute of Technology madras, and Prof. Ravikant Singh, Assistant Professor, Sandip Institute of Technology & Research Center Nashik, Maharashtra. This session covers the various aspects of low and high velocity impact on composite material.

**Day 4: Interlaminar fracture toughness response of FRP composite laminates**

Day 4 sessions were taken by Dr. Ruchir Srivastava, Researcher, Indian Institute of Technology (ISM) Dhanbad. This session covers the fracture behavior of fiber reinforced polymer composites. Interlaminar fracture or delamination is one of the major failure modes for fiber reinforced polymer (FRP) composites.

**Day 5: Introduction to nanocomposite and their application**

Day 5 sessions were taken by Dr. Anand Gaurav, Assistant Professor, SRM University Haryana, and Dr. Md. Alamgir, Assistant Professor, Milla Kisangani College of Engineering and Technology Kisangani Bihar. A *nanocomposite* is a matrix to which nanoparticles have been added to improve a particular property of the material. The properties of nanocomposite have caused researchers and companies to consider using this material in several fields.

## 9. Event photos:

### Day 1:

The screenshot shows a Zoom meeting interface. The main window displays a presentation slide titled "Composite materials - Introduction". The slide content is as follows:

- ◆ Definition: any combination of two or more different materials at the macroscopic level.
- OR
- ◆ Two inherently different materials that when combined together produce a material with properties that exceed the constituent materials.
  - Reinforcement phase (e.g., Fibers)
  - Binder phase (e.g., compliant matrix)
- ◆ Advantages
  - High strength and stiffness
  - Low weight ratio
  - Material can be designed in addition to the structure

The meeting controls at the bottom show several participants: Anand Gaurav, RAJU THAKUR, Deepak Choudh..., Dr. SENTHUR VA..., 27 others, and Pratap Garudkar. A "People" sidebar on the right lists 33 contributors, including Pratap Garudkar (You), Aarti Puri, Amol Shinde, Amruta kale, Anand Gaurav, Anand Gaurav Presentation, Bitishree Patel, and buela nesakumari.

**Day 5:**

The screenshot shows a Google Meet interface with a presentation slide titled "Compression Analysis". The slide contains a graph of Load (N) vs. Displacement (mm) for two materials: PHEMA/TiO<sub>2</sub> and PHEMA/TiO<sub>2</sub>/GO. The PHEMA/TiO<sub>2</sub> curve shows a higher peak load and a densification region, while the PHEMA/TiO<sub>2</sub>/GO curve shows a lower peak load and an elastic region. A table to the right of the graph provides the following data:

Specimen	Density (ρ)	Specific stiffness (E/ρ)	Specific strength (L <sub>max</sub> /ρ)
pHEMA/TiO <sub>2</sub>	1.2091 g/cm <sup>3</sup>	69.15	372.177
pHEMA/TiO <sub>2</sub> /GO	1.1370 g/cm <sup>3</sup>	53.49	334.21

Below the table, the text reads: "Fig.13. Load-displacement curves of pHEMA/TiO<sub>2</sub> and pHEMA/TiO<sub>2</sub>/GO polymer nanocomposites." The Meet interface also shows a list of participants on the right and a toolbar at the bottom.
